CODE OF CONDUCT FOR STUDENTS ON INDUSTRIAL ATTACHMENT

1. Report on the expected date with your letter of introduction.
2. Report punctually for work every day and continue working until closing time.
3. Be disciplined and take instruction from your supervisor. Observe the rules and regulations of the organization to which you are attached.
4. Be polite to your co-workers and maintain cordial relationship with them. Even though your attachment will last for a limited period, show a sense of belonging to your place of attachment and identify with the permanent employees.
5. Do not idle away your time or loaf about. Do not gossip.
6. If you have any welfare problems, discuss them with your industry-based supervisor and inform your University-based supervisor when he/she visits your place of attachment.
7. Avoid any alliance with students from other institutions to make representations on any issue or protest against the administration of the establishment to which you are attached. Instead of allying with students from other institutions, you should discuss your problems with your University-based supervisor when he/she visits your place of assignment. If necessary, he/she will speak to the management on your behalf.
8. Identify and document any industrial problems in your place of attachment especially problems whose case study or solution will improve the operational efficiency of the industry. Such industrial problems should be fully described and documented in your industrial attachment report.
9. If you are posted out of station by the parent company, you should write to this University and inform your University-based supervisor.
10. Industrial attachment allowance is a privilege to students whose degree programs are supported by ITF. Therefore, it is not a right.

DAILY RECORD WORK DONE

WEEK ENDING:(Dates) 31st August, 2026 to 4th September, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Reported to the ICT Park and attended an introductory session on the ICT unit, workplace expectations and activities. Observed a demonstration of basic Microsoft Word document editing, including page setup and text formatting. Participated in introductory questions & discussions.
TUE.	Continued orientation at the ICT Park. Observed demonstrations on Microsoft Word document editing and formatting. Practised basic word features and learned how to modify and arrange document contents.
WED.	Continued learning basic Microsoft Word operations. Practised document formatting, page setup and text arrangement. Observed demonstrations and followed instructions on editing and organizing document contents.
THUR.	Continued practical learning with Microsoft Word. Reviewed Page setup, text formatting and useful keyboard shortcuts. Practised the demonstrated features and participated in questions and discussions.
FRI.	Continued learning basic Microsoft Word operations. Practised document formatting, page setup and text arrangement. Observed demonstrations and followed instructions on editing and organizing document contents.
~~SAT.~~	Attended the ICT Park and listened to discussions on Creativity, skill development and workplace learning. Observed a presentation on ICT services including Cybersecurity, Hardware, Software, and troubleshooting. Received guidance on developing practical networking skills and the use of basic tools

DAY	DESCRIPTION OF WORK DONE
MON.	Reported to the ICT Park and attended an introductory session on the ICT unit, workplace expectations and activities. Observed a demonstration of basic Microsoft Word document editing, including page setup and text formatting. Participated in introductory questions & discussions.
TUE.	Continued orientation at the ICT Park. Observed demonstrations on Microsoft Word document editing and formatting. Practised basic Microsoft Word features and learned how to modify and arrange document contents.
WED.	Continued learning Microsoft Word and practised basic document formatting and editing. I learned how to set up a page and use keyboard shortcuts and word features to create and modify documents.
THUR.	Started learning HTML and was introduced to basic web-page structure, HTML tags and elements. I also learned about web development and discussed the importance of acquiring practical technical skills alongside academic knowledge.
FRI.	Attended the ICT Park and listened to discussions on creativity, skill development and workplace learning. Observed a presentation on ICT services including cybersecurity, hardware, software and trouble shooting etc. Received guidance on developing practical networking skills and the use of basic tools.
SAT.

DAILY RECORD WORK DONE

3

WEEK ENDING:(Dates) 7th September, 2026 to 11th September, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Studied basic Computer hardware and their functions. Identified the motherboard, CPU, RAM, HDD, PSU, USB ports and other interfaces. Learned the roles of BIOS and UEFI during system startup and practised identifying Computer components and ports.
TUE.	
WED.	Studied files and folders management in Windows. Practised creating, copying, moving and deleting files and folders. Learned common file extensions, file size and basic file properties. Created and organized a "Digital Forensics Practice" folder containing text files and subfolders.
THUR.	Examined Computer system information, including HDD and SSD storage, drives, partitions and basic files system components. Used Task Manager to observe CPU, memory, disk and network performance and recorded the observations.
FRI.	Studied the connection between Computer systems and digital forensics. Reviewed Computers, storage devices, operating systems, files and system information as potential sources of digital evidence.
SAT.

DAILY RECORD WORK DONE

WEEK ENDING:(Dates) 14th September, 2026 to 18th September, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Studied Windows administration and System navigation. Explored the Windows desktop, Start menu, taskbar and basic System settings. Practised navigating different system options and accessing system information.
TUE.	Studied Windows user accounts and permissions. Learned the difference between Standard and administrator accounts and how permissions control access to files and system resources.
WED.	Examined installed programs and Windows system components. Used Device Manager to view hardware devices and Task Manager to observe running applications, processes and system resources.
THUR.	Studied Windows Services and Event Viewer. Examined system, application and security events and learned how logs can provide information about activities occurring on a Computer.
FRI.	Studied Windows maintenance and System Configuration. Examined Windows Update, System settings and basic environment variables and reviewed their importance in managing a Computer system.
SAT.

MONTHLY SUMMARY OF WORK BY STUDENT

(WEEK 1 - 4)

During Weeks 1 – 4, I gained practical knowledge of Computer Systems and Windows administration. I studied Computer hardware, including:

(1) CPU
(2) RAM
(3) HDD
(4) SSD
(5) PSU
(6) UPS and Common Computer interfaces.

I also developed and understanding of how Computer Systems, Storage devices, files and operating-system information can serve as a source of digital information and potential evidence in digital forensics.

I also learned about Windows system navigation, files and ~~folders~~, drives, user accounts, permissions, system information, Task Manager, Device Manager and Event Viewer. Practical activities included identifying computer components, organising files and folders, examining system performance and reviewing Windows system information.

DAILY RECORD WORK DONE

5

WEEK ENDING:(Dates) 21st September, 2026 to 25th September, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Practiced basic Windows Command Prompt for the fundamentals of Computer networking, including LAN, WAN, clients, servers and Common network devices.
TUE.	Studied IPv4, IPv6 and MAC addresses. Practiced viewing the networks Configuration of a computer and identified the different address types.
WED.	Studied DNS and DHCP and Learned their functions in network Communication. Also examined the basic functions of routers and switches.
THUR.	Studied TCP/IP, TCP and UDP protocols and network ports. Learned how ports are associated with network Services and applications.
FRI.	Reviewed networking fundamentals and practiced basic network Commands for viewing IP Configuration, networks Connections and related information
SAT.

DAILY RECORD WORK DONE

WEEK ENDING:(Dates) 28th September, 2026 to 3rd October, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Practiced basic Windows Command Prompt commands for navigating directories, viewing files and creating folders.
TUE.	Studied Windows user accounts, administrator privileges and file and folder permissions. Examined how permissions control access to resources.
WED.	Studied Windows processes and services. Practiced viewing running processes and examined the purpose of system services.
THUR.	Introduced to the Linux operating system and practiced basic Commands including pwd, ls, cd, cat, touch, yes, sudo and mkdir.
FRI.	Reviewed Windows and Linux Command-line operations, users ponissions, processes and Services and related them to digital forensics examination.
SAT.	Make Installation of Softwares in the ICT and also checked the Specifications of the systems. Also take a look at the Switches and networking devices.

DAILY RECORD WORK DONE

1

WEEK ENDING:(Dates) 5th October, 2026 to 9th October, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Studied the fundamentals of digital forensics and identified Computers, Storage devices, mobile devices and logs as possible sources of digital evidence.
TUE.	Studied the identification and preservation of ~~creating a forensic copy of~~ digital evidence for examination. Learned the importance of maintaining evidence integrity and proper documentation.
WED.	Studied forensic aquisition and the Concept of creating a forensic copy of digital evidence for examination.
THUR.	Studied forensic examination and analysis. Practiced identifying relevant files, metadata and timestamps from a Controlled dataset.
FRI.	Studied forensic reporting and learned how ~~to~~ observations, methods, findings and Conclusions are documented in a forensic investigation.
SAT.

DAILY RECORD WORK DONE

WEEK ENDING:(Dates) 12th October, 2026 to 16th October, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Studied digital evidence and the importance of maintaining its integrity during forensic investigations. Learned why evidence must be handled carefully to prevent alteration or loss.
TUE.	Learned about cryptographic hashes and their use in verifying file integrity. Studied the purpose of MD5 and SHA-256 hashes and how changes to a file can produce a different hash value.
WED.	Forensic Imaging - Studied forensic imaging and the difference between an original storage device and a forensic image. Learned why evidence acquisition should follow approved procedures.
THUR.	Studied the chain of custody and the importance of recording evidence collection, handling, transfer, storage and examination.
FRI.	Evidence Documentation - Reviewed the importance of documenting evidence details, hash values, handling activities and examination results in a forensic investigation.

MONTHLY SUMMARY OF WORK BY STUDENT

(WEEK 5 - 8)

During Weeks 5 - 8, I studied Computer networking, Windows and Linux Command-line operations, and digital evidence integrity. I learned about LANS, IP and MAC addresses, DNS, DHCP, TCP/IP, network ports, user permissions, processes and system services. I also studied cryptographic hashing, forensic imaging, chain of custody and evidence documentation.

These topics improved my understanding of computer systems and the importance of preserving digital evidence for forensic examination.

DAILY RECORD WORK DONE

WEEK ENDING:(Dates). 19th October, 2026 **to.** 23rd October, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Introduction to Cybercrime - Studied Common forms of Cybercrime, including online fraud, phishing, identity theft, unauthorized access and malware-related incidents.
TUE.	Phishing and Online Fraud - Learned how phishing and online fraud may use deceptive messages, links and websites to obtain information or money. Studied basic indicators of suspicious messages.
WED.	Identifying Potential Evidence - Studied potential evidence sources in Cybercrime cases, including emails, browser history, downloaded files, system logs and relevant communications.
THUR.	Investigation and Time-line - Learned how investigators organize available records by date and time to develop a timeline of events in a Cybercrime investigation.
FRI.	Case Documentation - Reviewed how to document a Cybercrime case by recording the incident, potential evidence sources, observations and questions requiring further investigation.
SAT.

DAILY RECORD WORK DONE

WEEK ENDING:(Dates) 26th October, 2026 to 30 October, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Introduction to Python – Studied the Python programming language and its uses in automation and digital forensics. Learned basic concepts such as variables, strings, numbers and data types.
TUE.	Conditions and Loops – Learned about conditional statements and loops in Python. Studied how these structures can automate repetitive tasks when processing files and information.
WED.	File Handling – Studied Python file handling and learned how programs can open, read and process text files in a controlled practice environment.
THUR.	File Metadata and Hashing – Learned how Python can be used to inspect file information and calculate SHA-256 hashes to support file-integrity checks.
FRI.	Basic Forensic Automation – Reviewed how Python scripts can help automate tasks such as listing files, searching for keywords, calculating hashes and summarising results.
SAT.

DAILY RECORD WORK DONE

11

WEEK ENDING:(Dates) 2nd November, 2026 to 6th November, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Investigation Planning – Studied how to define the objective and scope of a digital forensic examination. Learned the importance of using authorized evidence sources and documenting the examination plan.
TUE.	Evidence Identification – Practised identifying potential digital evidence in Controlled test folder or authorized Practice dataset. Recorded basic file names, types and locations.
WED.	Evidence Examination – Examined permitted practice files and their properties, including file types, sizes and available timestamps. Recorded observations for further analysis.
THUR.	Analysis and Timeline – Studied how to organize examination findings and relevant timestamps into a chrological timeline. Learned to distinguish direct observations from interpretations.
FRI.	Forensic Report Writing – Studied the structure of a digital forensic report, including the objective, evidence examined, methods, findings, limitations and conclusion.
SAT.

WEEK ENDING:(Dates) 9th November, 2026 **to** 13th November, 2026

DAY	DESCRIPTION OF WORK DONE
MON.	Review of Digital Forensics Concepts - Reviewed digital forensic principles, evidence sources, preservation, hashing, examination and reporting.
TUE.	Review of Computer and System Evidence - Reviewed how computer hardware, operating systems, storage devices, files and systems logs may contain information relevant to a forensic investigation
WED.	Review of Python Automation - Reviewed basic Python concepts and their possible application to file listing, metadata collection, hashing and text searching.
THUR.	Forensic Documentation - Practised organizing notes and sample examination results into a clear record. Reviewed the importance of accurate timestamps, evidence identification and documenting limitations.
FRI.	Final Learning Review - Summarized the skills and concepts studied throughout the learning programme and reviewed how computer systems, networking, system records and Python automation support digital forensics.
